

## Integration Methods

SportsPay provides two seamless integration methods for registration platforms, ensuring secure and efficient payment processing. Each method is designed to accommodate different levels of control, security, and ease of implementation.

### 1. DIRECT PAYMENTS (WITH EMBEDDED TOKENIZATION)

**Best for:** Platforms requiring full control over the user experience while maintaining security and compliance.

- Enables registration platforms to send complete transaction details, including card data, directly to the InterPay™ gateway.
- Uses **Embedded Tokenization** to exchange sensitive card data between the browser and gateway securely via JavaScript.
- InterPay™ JavaScript generates a **One-Time Token (OTT)**, ensuring that raw cardholder data never touches the registration platform's servers.
- Transactions return a **Permanent Token**, allowing for stored card functionality, recurring billing, and one-click payments.
- **Security & Compliance:** Keeps the registration platform out of PCI scope while offering strong data protection.
- **Performance & Usability:** Ensures seamless, developer-friendly integration with minimal effort.

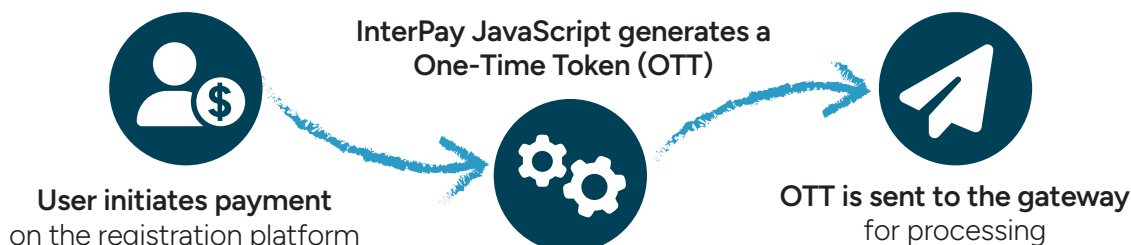

#### STEPS FOR DIRECT PAYMENTS INTEGRATION

##### Step 1: Card Data Collection using Embedded Tokenization

- The process begins with loading InterPay JavaScript, which securely collects card data from the user's browser.
- The JavaScript generates a One-Time Token (OTT), ensuring that raw cardholder data never touches the registration platform's servers.

##### Step 2: Using the OTT for Payment Processing

- The OTT is then used to perform a Direct Payment transaction (e.g., Sale, Refund, etc.) by sending it to the InterPay™ gateway.
- Transactions return a Permanent Token, allowing for stored card functionality, recurring billing, and one-click payments.

## 2. REDIRECT PAYMENTS

**Best for:** Platforms looking for an easy-to-implement solution that ensures full PCI compliance.

- The registration platform **redirects users** to SportsPay's hosted payment page.
- Once the transaction is completed, users are returned to the registration system.
- The platform's server never interacts with card data, reducing compliance requirements.
- Supports **Sale, Refund, and Tokenization** operations.
- **Security & Compliance:** Keeps cardholder data off the platform's servers, significantly reducing PCI compliance burdens.
- **Efficiency & Compatibility:** Requires only two API requests - one to initiate the transaction, another to retrieve results.

### STEPS FOR REDIRECT PAYMENTS INTEGRATION

#### Step 1: Start Session

- The registration platform sends a transaction setup request to the InterPay™ gateway, including key transaction details (e.g., amount, request ID).

#### Step 2: Retrieve Redirect URL

- The gateway responds with a unique URL for redirecting the user to the hosted payment page.

#### Step 3: User Completes Payment

- The user is redirected to SportsPay's secure hosted payment page and enters their payment details.

#### Step 4: Redirect Back to Platform

- Upon successful transaction, the user is redirected back to the registration platform's return URL.

#### Step 5: Retrieve Transaction Result

- The registration platform sends a final request to the InterPay™ gateway to confirm and retrieve the transaction result.

## API Groupings

SportsPay's Payment API is structured into two main categories:

### DIRECT PAYMENTS API

(for Embedded Tokenization transactions)

### REDIRECT PAYMENTS API

(for Hosted Payment transactions)

## Key Benefits of Integration with SportsPay

- **Comprehensive Functionality:** Both integration methods provide access to all SportsPay functionalities, including CustomerPay, Platform Fees, Split Payments, and Transfers.
- **Security & Compliance:** Tokenization ensures that raw card data is never exposed.
- **Flexibility:** Choose the integration method that best suits your platform's needs.
- **Developer-Friendly:** Simple API structure with extensive documentation and support.
- **Enhanced User Experience:** Maintain full control with Direct Payments or leverage an easy, secure hosted page with Redirect Payments.
